1. Struktur Tabel Database

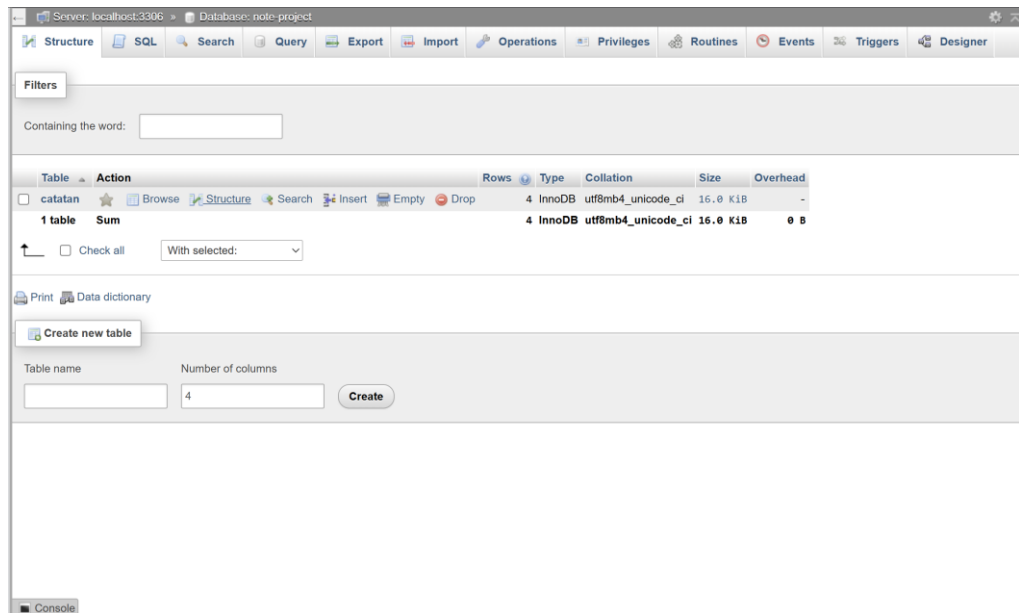

```
model Catatan {  
    id          Int      @id @default(autoincrement()) @db.UnsignedInt  
    judul       String   @db.VarChar(255)  
    isi         String   @db.Text  
    tanggal_dibuat DateTime @default(now())  
  
    @@map("catatan")  
}
```

2. Screenshot:

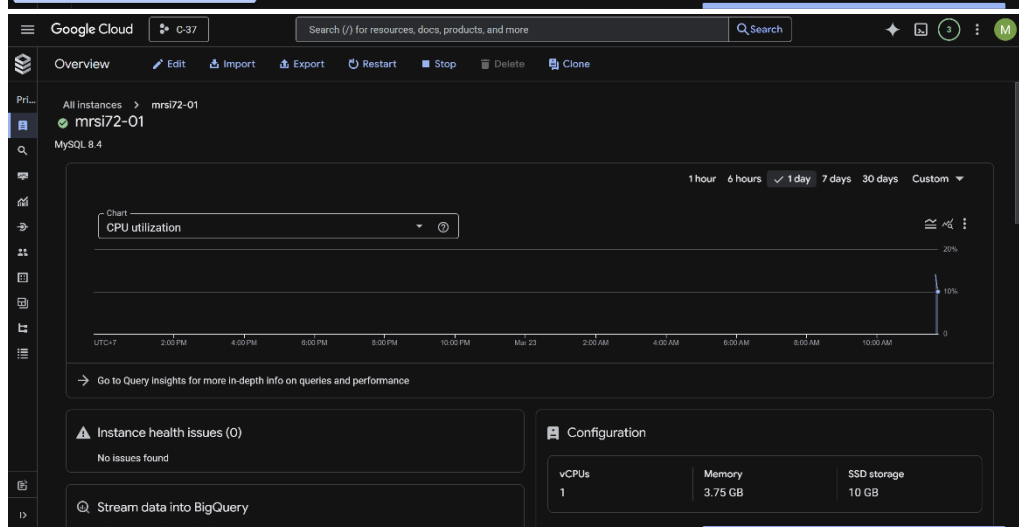

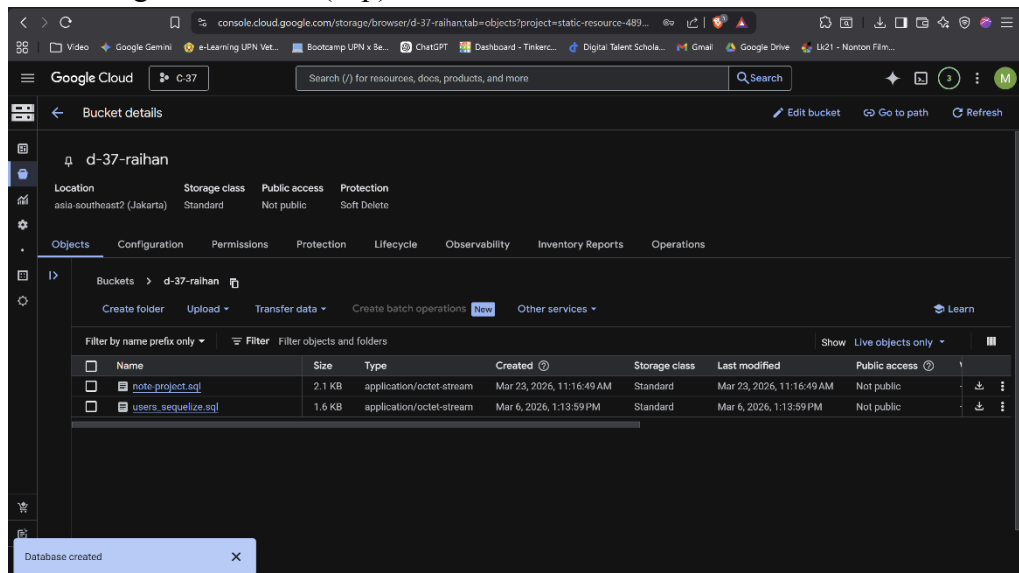

a) Aplikasi berjalan secara lokal

b) Database lokal sebelum migrasi

c) Proses migrasi database (.sql)

The image consists of three screenshots from the Google Cloud console, illustrating the setup and management of a MySQL instance.

Top Screenshot: Databases
This screenshot shows the 'Databases' page for the MySQL instance 'mrsi72-01'. It displays a table of databases and their configurations.

Name	Collation	Character set	Type
information_schema	utf8mb3_general_ci	utf8mb3	System
mysql	utf8mb3_general_ci	utf8mb3	System
note-project	utf8mb4_0900_ai_ci	utf8mb4	User
performance_schema	utf8mb4_0900_ai_ci	utf8mb4	System
sys	utf8mb4_0900_ai_ci	utf8mb4	System
users_sequelize	utf8mb4_0900_ai_ci	utf8mb4	User

Middle Screenshot: Users
This screenshot shows the 'Users' page for the MySQL instance 'mrsi72-01'. It displays a table of users and their configurations.

User name	Host name	Authentication	Password status
mrsi72-01	% (any host)	Built-in	N/A
root	% (any host)	Built-in	N/A

Bottom Screenshot: Import data
This screenshot shows the 'Import data' dialog box for the MySQL instance 'mrsi72-01'. It displays the 'Source' and 'Destination' sections.

Source
Choose the location and format of the file to import. [Learn more](#)

File format
☒ SQL
A plain text file with a sequence of SQL commands, like the output of mysqldump

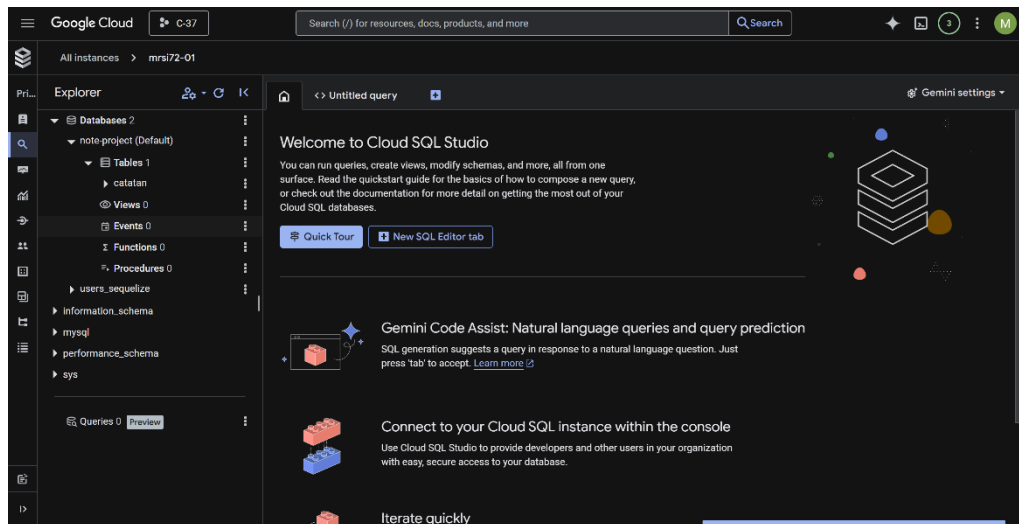

☐ CSV
If your Cloud Storage file is a CSV file, select CSV. The CSV file should be a plain text file with one line per row and comma-separated fields. Make sure the database and schema already exist and match the CSV file.

Select source file
☐ Upload files from your computer
☒ Select file from Google Cloud Storage
bucket-name/file-name *
☒ d-37-raihan/note-project.sql [Browse](#)
Browse for a Cloud Storage file or enter the path to one (bucket/folder/file)

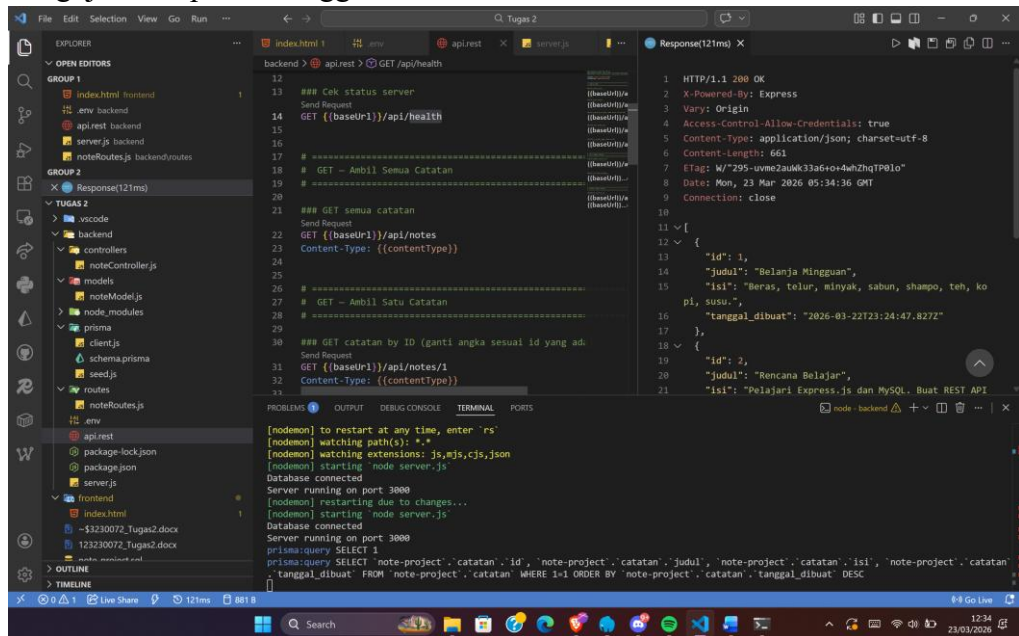

Destination
Choose a destination database for your import. If your file already specifies the destination, this selection will be overridden. SQL file must contain "CREATE" and "USE" commands to specify the destination database. [Learn more](#)

Database
note-project

d) Database di Cloud SQL atau MySQL di VM

e) Pengujian endpoint menggunakan REST API client/Postman

f) (Bonus) Frontend berhasil diakses melalui IP VM
